

California Project Experience

Since the passing of SB54 in 2017, Matrix NAC established two offices in California to provide union construction services to the refining sector. Matrix is currently providing maintenance, turnaround, and tank construction services in both Northern & Southern California. Matrix holds a California 'A' license as well as a number of local licenses throughout California.

Matrix NAC's experience in California dates back to 2001 with the construction of two gas-fired power plants. In the mid-late 2000s, new power plant construction projects in California began to slow. During that time, Matrix NAC secured several large power generation and environmental projects in other parts of the US & Canada and its focus turned to the US East & Midwest.
